**1. Brief Information on Making of Seed Balls:**

Seed balls are specially prepared balls with seeds coated in soil and *Jeevamrut*, a cow dung and cow urine based bioenzyme. Due to use of Jeevamrut, the survival level of plants is more than 90%. Every year our students prepare seed balls and distribute it to the villagers. Seed balls are also planted along the Close Contour Trenches (CCTs) dug by our students. Routine follow up is also taken and the survival rate is very satisfactory.

PREPARATION OF SEED BALLS AND USE FOR PLANTATION

 Pune-411 041.

## 2. TREE PLANTATION ACTIVITIES

The faculty members and students are encouraged for planting trees. Every year our students and faculty members take part in the tree plantation drive organized by various organisations such as Rotary Club etc. They also participate in such activities organized by Savitribai Phule Pune University.
